

TABLE OF CONTENTS

EXECUTIVE SUMMARY	5		
1. THE NEW MOBILITY ERA	15		
1.1. The increasing demand for mobility and the need for social change	17		
1.2. The European Union towards safe, clean and connected mobility	23		
1.2.1. The cooperative intelligent transport systems: a European strategy for the future	23		
1.2.2. EU mobility packages	24		
1.2.3. National plans for alternative fuel infrastructure	40		
2. SUSTAINABLE MOBILITY	47		
2.1. Energy mix scenarios in the EU transport sector	49		
2.2. E-mobility and alternative fuels	50		
2.2.1. Low carbon liquid fuels	52		
2.2.2. Electric vehicles in Europe	53		
2.2.3. The role for natural gas	57		
2.2.4. Hydrogen and fuel cell scenarios	59		
		2.3. New industrial synergies between the energy and mobility sectors	61
		3. THE DIGITAL TRANSFORMATION IN THE TRANSPORT SECTOR	65
		3.1. Shared mobility and its impact on consumers and costs	67
		3.1.1. Shared mobility: services and characteristics	67
		3.1.2. Opportunities and challenges of car sharing and user experiences	71
		3.2. The impact of IoT and 5G on the transport industry	74
		3.2.1. Autonomous and connected cars: current situation and market trends	74
		3.2.2. IoT and 5G trials and projects in rail and maritime sectors	81
		3.2.3. Opportunities and challenges in the age of smart vehicles	84
		3.3. Blockchain: applications in the mobility industry	91
		CONCLUSIONS AND POLICY RECOMMENDATIONS	95
